Professional Summary

AI & Behavioral Psychology Researcher with a background in full-stack development and mechatronics. Connects research on attention, decision-making, and human-AI interaction with practical AI product development. Builds agent workflows, model integrations, browser automation, and voice interfaces using JavaScript, TypeScript, Python, Node.js, and React. Experienced in API integration, responsive interfaces, and cloud deployment.

WORK EXPERIENCE

IMAI Studio **San Francisco Bay Area, USA · Hybrid**
AI & Behavioral Psychology Researcher *Apr 2025 - Present*

- Research human perception and behavior to understand how people interpret, trust, and respond to AI systems, connecting these questions to practical product experiences.
- Explore cognitive patterns, attention, persuasion, and decision-making to inform human-AI interactions and more intuitive ways to use creative AI tools.
- Develop agent workflows with Node.js and the Vercel AI SDK, connecting model responses with application tools and user-facing actions.
- Build ChatAdapters for Telegram, WhatsApp, Discord, and Slack so users can interact with agents through familiar messaging channels.
- Integrate models through OpenRouter for design-focused use cases, connecting model capabilities with the needs of creative workflows.
- Design prompts and organize context for agent tasks, including instructions, relevant inputs, and information required for useful responses.
- Add voice transcription to agent interactions so users can describe ideas and requests through speech as well as text.
- Explore Stagehand browser automation to help agents inspect websites and understand their visual structure, page content, and design language.
- Build REST API endpoints that allow external platforms to use agent capabilities and integrate them into connected product workflows.
- Extend platform tooling across Figma and Shopify, working at the boundary between design tools, web interfaces, and AI-assisted creation.
- Collaborate with design and engineering colleagues on onboarding and landing-page interfaces that explain platform capabilities and help users get started.
- Refine brand research, social-asset, and media-organization workflows, linking creative production needs with agent-assisted tools.

WORK EXPERIENCE

KEMURI Technology **Bengaluru, India · On-site**
System Engineer *Dec 2024 - May 2025*

- Contributed to Kuruco, a cloud-native service for customizable front-end applications and external API integrations.
- Built a React Native application for COE and deployed its iOS build to TestFlight for client testing and feedback.
- Improved responsiveness and accessibility for Nagarika, and translated client Figma designs into working front-end interfaces.
- Researched architecture for a multi-tenant client platform, assessing scalability and performance requirements.

Environ India **Bengaluru, India · Hybrid**
Full-stack Developer & Machine Learning Engineer · Part-time *Oct 2024 - Nov 2024*

- Developed a recycling application connecting users, collectors, and plants, with pickup scheduling, route planning, and inventory workflows using React, Node.js, MongoDB, Google Maps, and payment integrations.

Cinefirm **Bengaluru, India · Remote**
Full-stack Developer · Freelance *Sep 2024 - Nov 2024*

- Built a Next.js portfolio and responsive booking system for photography and videography services, using GSAP animation and Vercel hosting.
- Implemented search metadata, robots.txt, and a sitemap, and refined responsive layouts and navigation.

Ammas Pastries **Kothanur, India · Hybrid**
Full Stack Developer *Jul 2023 - Aug 2024*

- Migrated the website to React and developed Next.js interfaces for product discovery and ordering.
- Connected WordPress content and customer workflows through REST APIs; implemented cloud functions for Razorpay payments.
- Built location-based delivery pricing and a centralized in-store display system for product launches.
- Improved SEO and accessibility. Built GeoMapper with Google Distance Matrix API to help customer-care staff find the nearest outlet.

Hindustan Aeronautics Limited **Bengaluru, India · On-site**
Engineer Intern *Jul 2022 - Aug 2022*

- Assisted engineering teams with the design and development of aerospace components, gaining exposure to how mechanical engineering principles apply to aerospace work.
- Conducted research and analysis for engineering projects to support the team’s investigation of technical questions and proposed solutions.
- Worked with cross-functional teams on ongoing assignments and took part in technical discussions about engineering problems and possible improvements.
- Gained practical exposure to industry-standard tools and technologies, strengthening technical understanding and problem-solving skills in an aerospace environment.

EDUCATION

REVA University **May 2020 - Jul 2023**

Bachelor of Technology - Mechatronics, Robotics, and Automation Engineering

Grade: Distinction. Focus on mechanical systems, electronics, robotics, and automation.

Technical Skills

AI & Research: Human-AI interaction, behavioral research, large language models (LLMs), agent orchestration, context engineering, prompt design, retrieval-augmented generation (RAG), semantic search, tool calling, browser automation, voice interfaces.

Development: JavaScript, TypeScript, Python, React, Next.js, React Native, Node.js, REST APIs, Vercel AI SDK, OpenRouter, Stagehand.

Data & Delivery: MongoDB, vector databases, Git, GitHub, Vercel, Firebase, API integration, responsive design, accessibility, search engine optimization.

Prototyping: CAD, digital fabrication, embedded systems, robotics, computer vision, Figma, ComfyUI.

Relevant Coursework & Learning

Electric Vehicles and Mobility - Ecole des Ponts ParisTech, May 2023. Credential: QK5AESQLGUWG.

Independent learning: Deep learning, large language models, accelerated computing, and simulation through NVIDIA learning resources.
